

Alpix and HyperApex Q&A

Updated 14 October 2026

Alpix.io and HyperApex are two trading apps from one team. You trade from your own crypto wallet, and neither app holds your deposits.

The basics

What are Alpix.io and HyperApex?

Both are decentralized exchanges for perpetual futures ("perps"), built by the Alpix team. A perp lets you go long or short on a crypto price with leverage, and it never expires.

	Alpix.io	HyperApex
Built on	Orderly Network	Hyperliquid
Best for	Trading the \$ALPIX perp and using the AI Trader	Your first trade: simple one-tap trading from your phone
Markets	BTC, ETH and 100+ crypto pairs	200+ markets: crypto, plus perps on stocks, indices and commodities
Top leverage	Up to 50x	Up to 40x
Extras	AI Trader agents	Get Lucky, Ask AI, HyperApex Pro, Alpha Master bots
Start here	app.alpix.io	hyperapex.io

Which one should I start with?

Start with HyperApex if you have never traded perps. It takes four taps to open a trade.

Move to HyperApex Pro when you want full order types and charts. Use Alpix.io to trade the \$ALPIX perp or to try the AI Trader.

Do I need to register or pass KYC?

No. There is no sign-up form and no KYC. You connect a wallet, and that wallet is your account.

Can I use it from my country?

Both apps are closed to US persons and anyone in the United States, and to residents or citizens of sanctioned countries such as Cuba, Iran and North Korea. HyperApex is also closed to anyone in Ontario, Canada.

These are the rules of the platforms the apps run on. Their terms are linked under "Verify it yourself".

Do the two apps share one account?

Not yet. You connect your wallet to each app and fund each one separately. One wallet for both apps is planned for the end of 2026.

Getting started

What do I need before I start?

A crypto wallet and some crypto to deposit. USDC is the simplest.

On HyperApex you can also sign in with email or Google. The app then creates a wallet for you.

Which wallets work?

- **HyperApex:** MetaMask, Trust Wallet, Rabby, Phantom, Coinbase Wallet and any WalletConnect wallet. The wallet must support the Arbitrum One network.
- **Alpix.io:** MetaMask, Binance Wallet, WalletConnect wallets and Solana wallets.

How do I place my first trade on HyperApex?

1. Open hyperapex.io and tap Connect. Sign in with your wallet, email or Google.
2. Tap Deposit and add at least 5 USDC.
3. Pick a market, set your amount and leverage, then tap Long or Short.
4. Approve the two one-time signatures when your wallet asks.

If you use a wallet app on your phone, open hyperapex.io inside its built-in browser.

What will my wallet ask me to approve on HyperApex?

Two one-time signatures. Neither costs anything.

- **Approve trading agent.** Lets HyperApex place the orders you tap. It cannot withdraw your money.
- **Approve HyperApex fee.** Authorises HyperApex's fee of 0.055% per trade.

I hold a different coin on a different chain. Can I still deposit?

Yes.

- **HyperApex.** The Deposit screen takes USDC, USDT, ETH and most major tokens from 20+ chains, including Ethereum, Base, BNB Chain, Solana and Polygon. It swaps and bridges them into USDC for you, using LI.FI. Network and bridge fees are shown before you confirm.
- **Alpix.io.** Deposit USDC from 14 networks, including Arbitrum, Optimism, Base, Ethereum, BNB Chain, Solana and Avalanche.

How long does a HyperApex deposit take, and what is the minimum?

The minimum is 5 USDC. USDC already on Arbitrum arrives in under a minute. Other tokens and chains usually take 1 to 5 minutes.

You need a little ETH on Arbitrum for gas, usually less than 0.10 USD. The Deposit screen has a Refuel option if you have none.

How do I start on Alpix.io?

1. Open app.alpix.io and connect your wallet.
2. Deposit USDC.
3. Pick a pair, set your leverage and place the trade.

What should my first trade look like?

Small, and with low leverage. Use an amount you can afford to lose while you learn how positions, fees and liquidation work.

Who holds my money?

Do Alpix or HyperApex hold my deposit?

No. Neither app ever holds your deposit.

- On Alpix.io, your deposit goes from your wallet into a vault smart contract on the blockchain.
- On HyperApex, your deposit is credited to your own Hyperliquid account.

You can see both transfers on a public block explorer. The links are under "Verify it yourself" below.

Can Alpix or HyperApex withdraw my money?

No. A withdrawal needs a signature from your own wallet. We do not have your keys, so we cannot sign for you.

The trading approval you give HyperApex lets the app place your orders. It cannot withdraw.

How do I withdraw?

Withdraw from the app whenever you like. There is no lock-in. Money used as margin in an open position is released when you close that position.

On HyperApex, USDC returns to your wallet on Arbitrum, usually within a few minutes. Hyperliquid charges a flat 1 USDC fee per withdrawal.

Has the code been checked?

Yes. The smart contracts Alpix.io runs on have [public audit reports](#) from CertiK, Halborn, Zelic, Sherlock and others. An audit lowers the risk of bugs. It cannot remove it.

HyperApex runs no contracts of its own. It is a front end on Hyperliquid, so the contract risk there is Hyperliquid's.

Trading, costs and risk

What does trading cost?

About 0.1% of the position size per trade, on both apps. Opening and closing a position are two trades. On HyperApex, the order screen shows the fee before you confirm.

With leverage, the position is bigger than your deposit. 1,000 USDC at 10x is a 10,000 USDC position, so the fee is about 10 USDC.

Funding fees are separate. They pass between long and short traders and are not counted as trading fees.

Deposits and withdrawals can also carry network or bridge fees. They are shown before you confirm.

What is leverage, and how much can I lose?

Leverage multiplies your gains and your losses. At 10x, a price move of less than 10% against you can wipe out the margin on that trade. At 50x, less than 2%.

When that happens the position is closed automatically. This is called liquidation. Use low leverage until you know how it works.

What is Get Lucky?

A button on HyperApex that picks Long or Short for you at random. It uses the amount and leverage you set. It is a real trade with real money, so keep the size small. To choose the direction yourself, tap Long or Short instead.

What is Ask AI?

A button on HyperApex that gives a quick Long or Short lean, with two short reasons. It can be wrong. Treat it as a second opinion, not a signal.

Can I trade stocks?

On HyperApex, yes, as perps. You can go long or short on the price of stocks, indices and commodities, such as Tesla, Nvidia, the S&P 500 and gold.

You trade the price only. You do not own the share. The app may ask for one signature to move USDC into your stock balance.

What is HyperApex Pro?

The full exchange view at hyperapex.io/pro. It adds charts, an order book, limit, scale and TWAP orders, and take-profit and stop-loss. It uses the same wallet, the same balance and the same fees.

Is \$ALPIX a live token?

Not yet. What trades on Alpex.io today is a perpetual futures market on \$ALPIX, ahead of the token launch. It gives you price exposure, long or short. It does not give you tokens.

Trade it here: [the \\$ALPIX perp on Alpex.io](https://alpex.io).

How is the \$ALPIX price set, and what are the limits?

The token does not trade anywhere else yet. The price comes only from buyers and sellers in this market, so it can move sharply.

Leverage is capped at 5x and the smallest order is 10 USDC.

When will the \$ALPIX token launch?

There is no fixed date. The team will release the token gradually when market conditions are good. If they are not, it will wait and keep improving the product.

AI bots and AI Trader

These are two separate products. HyperApex has the Alpha Master bots. Alpex.io has the AI Trader. They are different systems.

What are the HyperApex bots?

Alpha Master bots trade on Hyperliquid 24 hours a day. Their live ROI, APR and PnL are published at bots.hyperapex.io.

Where does my money sit when I run a bot?

In your own Hyperliquid account. You approve a trading key that can place and cancel orders but cannot withdraw.

Only your own wallet can withdraw, and you can stop the bot at any time.

What does a bot cost?

1% of the amount you deposit, paid once before the bot starts. Deposit 1,500 USDC and the fee is 15 USDC.

If you add more later, the 1% applies to the new money only. There is no share of your profits.

How much do I need to start?

At least 1,500 USDC in your Hyperliquid account. The smallest trade size is 60 USDC.

The Basic plan runs on one wallet. A Pro plan with up to three wallets is marked "coming soon" on the bots site.

What should I know before I start a bot?

- Use a new wallet for the bot. The bot must be the only thing trading on that account.
- Deposit only USDC on Arbitrum One. The bots site warns that any other token or chain is lost.
- A circuit breaker closes every position if losses pass a set limit, then pauses the bot for 24 hours.

What is the Alpex AI Trader?

AI agents that trade for you on Alpex.io, at traders.alpex.io. Four are live: Honey AI, Swarm AI, Hive AI and Bee AI.

You browse the leaderboard, pick an agent, allocate an amount and activate it. Every AI trade is logged and visible, and you can withdraw at any time.

Are returns guaranteed?

No. Bots and AI agents can lose money, and past performance does not guarantee future results. Check the live numbers before you allocate, and only use money you can afford to lose.

Referral program

How does it work?

Share your link. When the people you refer trade, you earn a share of the trading fees, for life. Earnings are paid in USDC and shown in your account.

Platform	You earn	Your referral gets
Alpex.io	50% of Alpex's fee: about 350 USDC per 1,000,000 USDC traded	Standard fees
HyperApex	35% of HyperApex's fee: about 190 USDC per 1,000,000 USDC traded	15% of HyperApex's fee back: about 80 USDC per 1,000,000 USDC traded

Alpex.io pays you daily, into your trading account. HyperApex pays you weekly, to your wallet on Arbitrum.

Find your link on the [Affiliate page](#) of HyperApex, or under Rewards in the Alpex.io app.

How much can I earn?

About 350 USDC on Alpix.io and about 190 USDC on HyperApex, for every 1,000,000 USDC your referrals trade.

Volume is the full position size, so it grows faster than deposits. A trader with 1,000 USDC at 10x who opens and closes one position has traded 20,000 USDC.

What counts, and for how long?

Trading fees only. Bot fees and AI Trader fees are not included.

The link is for life. Once someone joins with your code, they stay attached to you.

For country partners

What does a country partner get beyond the referral program?

Partner terms, including any requirements or targets, are agreed privately with the team. Message us on the [official Telegram](#) to start.

How and when am I paid?

In USDC. Your earnings show in your account once you connect your wallet: the Affiliate page on HyperApex and the Rewards page on Alpix.io.

How long does my share last, and what does it cover?

For life. It covers trading fees only, not bot fees or AI Trader fees.

Is there a contract to sign?

Not at present.

What can I say when I promote?

There is no script to follow and no approval step. Three rules protect you and your community:

- Use figures people can check, from the links under "Verify it yourself".
- Never promise or guarantee returns. Trading and bots can lose money.
- Say clearly that this is leveraged trading and that users can lose their deposit.

Is there material I can use?

Yes. The [official links page](#) has the project brief and deck in English, Chinese, Japanese and Vietnamese, plus intro and tutorial videos.

Who provides the liquidity?

Orderly Network's order book on Alpix.io, and Hyperliquid's order book on HyperApex.

How do I show my community the numbers are real?

Send them the public links under "Verify it yourself". They open in any browser, with no login.

Help and official links

Where do I get help?

- [Official links page](#): every official channel, plus tutorial videos for getting started, deposits and the AI agents
- [Telegram, global](#)
- [Telegram, Chinese](#)
- [X: @alpex_io](#)

No one from Alpex or HyperApex will ever ask for your recovery phrase or private key.

Verify it yourself

You do not have to take our word for it. Each claim above can be checked on a public source.

Claim	Where to check
Alpex.io has traded over 1 billion USD	Orderly's public volume data . The line "perp_volume_ltd" is lifetime volume: 1.38 billion USD on 13 Oct 2026.
Alpex.io deposits sit in a vault contract, not with us	Orderly's Vault contract , shown here on Arbitrum, and the full list of Orderly contract addresses
The contracts are audited	Orderly's audit reports
HyperApex deposits go to Hyperliquid's bridge	Hyperliquid's bridge contract on Arbitrum. The HyperApex deposit screen links to the same address.
HyperApex trades happen on Hyperliquid	Hyperliquid explorer . Search your own wallet address to see your trades.
The \$ALPIX market's limits	Orderly's public market data . "base_imr" of 0.2 means 5x maximum leverage. "min_notional" is the 10 USDC minimum order.
Country rules	The terms of Orderly Network and Hyperliquid
Bot results are live	bots.hyperapex.io
